

## Fun Vulture Facts

- A vulture can eat up to 1kg (about 2.2lbs) in a single meal (that is more than 10% of its body weight!)
- By eating dead animals, vultures prevent the spread of diseases and also recycle nutrients.
- Different vulture species have different shaped beaks, which means that each feeds on a particular part of the carcass, reducing competition for food.

## Kids Menu

Don't miss out on the Vulture Culture Experience which takes place daily at 1pm below the Buffalo Bar Deck

## Good Afternoon Litshona njani • Masikati
